

Climate Change Policy

Approved by Board: Effective January 1, 2026

The Corporation or "Silver Tiger" recognizes that climate change is a critical global risk impacted by mining activity. We have a responsibility to minimize our contribution to climate change by reducing Greenhouse Gas ("GHG") emissions from our operations and across our supply chain. We're focused on extracting minerals sustainably, a requirement to support the transition to a clean economy.

We will consider climate-related risks and opportunities in our risk assessments and strategic planning processes. We will continue to monitor, manage and reduce our energy use from fossil fuels. We will continue to disclose our Scope 1 and Scope 2 GHG emissions in our annual Sustainability Report, and work towards disclosing our Scope 3 GHG emissions from our supply chain.

Considering that our operations currently depend on energy from fossil fuels, we are committed to improving our energy efficiency and actively look for opportunities to transition to renewable energy sources as they become increasingly viable, particularly for our remote mining operations. Through this policy, we will:

- Optimize the management and responsible use of fossil fuels;
- Explore opportunities to replace Diesel and Gasoline consumption with low-carbon fuels;
- Implement the use of energy-efficient conveyor belts where possible;
- Plan "In Situ" projects to minimize long-haul automotive transport;
- Evaluate opportunities to use renewable energy;
- Engage in environmental education for our stakeholders and interest groups.

Our committed relationships with the Indigenous communities of the regions in which we operate will help us to increase our understanding of the climate and how to increase the resilience of their lands that could be affected by our operations.

We will implement policies and processes that go beyond compliance with local, regional and national laws and regulations. We recognize that transparent disclosures related to climate change could extend to our stakeholders in our operations, supply chain, and communities of

interest. We will explore opportunities to effectively communicate our climate change commitments and urge our external stakeholders to comply with this policy.

Our Board of Directors will oversee the Climate Change Policy through executive and management leadership.
